

# OUTDOOR BLOWERS

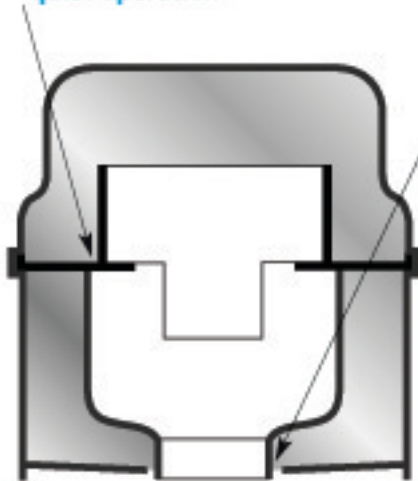

## Your Search For A Quiet Blower Will Lead You To One Source, The All New Silencer™ By Air Supply

The New Silencer by Air Supply has taken a quantum leap in quiet performance. The unique motor mount is the secret to our success. A thick rubber cup encases the fan while allowing the motor to vibrate freely on a flexible rubber base. This combination eliminates noise so well that virtually no foam is required. Many competitive blowers use filter foam to reduce noise, but foam may clog over time causing starvation and overheating.

Included with each Silencer is a durable spring check valve. This is far more effective than flapper valves at stopping motor damage, which means fewer service calls and more satisfied customers. Air Supply is committed to quality and service. Call us on our toll free line for technical information and blower sizing. In addition, an over the counter warranty is available at your locally authorized Air Supply distributor.

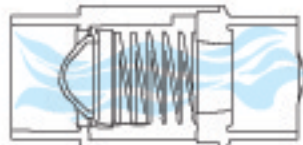

Acoustical anti-vibration motor mount ensures quiet operation

Air intake at bottom of the Silencer™ creates a tortuous path, trapping noise inside the blower.

Available with heater.

Durable spring check valve included with each Silencer™.
