

*When a lighting project calls for a higher level of LED illumination, choose the LM in a 2 LED configuration. To achieve the best effect and utility, install the LM fixture in the wall adjacent to a stairway.*

### PHOTOMETRICS:

Beam angle is calculated using LM-79 method for SSL Luminaires:

"Beam angle is defined as two times the vertical angle at which the intensity is 50% of the maximum."

### MOUNTING FEATURES AND DIMENSIONS:

#### Perfectly Level Every Time

The LevelX system allows the composite sleeve to be up to  $\frac{3}{8}$ " out of level, in either direction, while still allowing the faceplate to be laser level.

The secret: The trim attaches to the adjustable reflector assembly – not the composite sleeve or body. Heavy foam gasket keeps light spill to a minimum.
